# INTERNATIONAL JOURNAL OF VETERINARY SCIENCES AND ANIMAL HUSBANDRY

## INSTRUCTIONS

**Submit Manuscript:** Manuscript can be submitted through email attachment at [vet.manuscript@gmail.com](mailto:vet.manuscript@gmail.com) or through website [Submission Link](#).

Click the following links for download Copyright Agreement and Authorship Responsibility form.

1. [Words File](#), 2. [PDF File](#)

### **Fees Details:**

**Publication Charges:** Rs 500 for Indian Author and USD 30 for rest of world.

### **Manuscripts Submission:**

The manuscript must be submitted with a cover letter to the Managing Editor by e-mail submission at [vet.manuscript@gmail.com](mailto:vet.manuscript@gmail.com). After the successful submission of manuscript the corresponding author will be acknowledged within one week. Any query regarding the preparation & submission of a manuscript to the journal should be addressed via [contact us](#). English is the official language of the journal. Original Research Articles not previously published and not being considered for publication elsewhere only should be submitted.

Corresponding authors must declare that the manuscript is submitted on behalf of all authors. Copyright belongs to the publisher upon acceptance of the manuscript. Rejected manuscript will not be returned to the authors. Submission of a manuscript signifies acceptance of journal's guidelines for authors.

**Manuscript presentation:** These articles should clearly describe new and carefully confirmed results and experimental procedure which should be given in the required details for others to verify the work. **The manuscript should be prepared in English using "MS Word". "Times New Roman" font should be used. Manuscripts must be typed double spaced with margins of one inch (2.5 cm) at the top, bottom and the sides and, all pages numbered starting from the title page. Lines should be numbered in the margins with a continuous numbering from the start of the manuscript.**

The font size should be of 12pt throughout the manuscript and main headings and subheadings should be in bold. All research articles should have the following sections: **Title page, Abstract, Keywords, Introduction, Materials and methods, Results, Discussion, Conclusion, Acknowledgement (if any) and References.** The sections in the text should be subdivided as 1, 1.1, 2, 2.1, 2.1.2 likewise.

**The Author may provide at least three potential reviewers of same research field, not from the host institute with their full addresses, e-mail id and mobile number.**

**Title:** The title should be followed by the author's name, the author's affiliations and address. In cases where there are two or more authors, superscripts must be used to indicate the affiliations of each author. The title page should contain the title of the paper in bold face, title case, the names of the authors in normal face, upper case (font size 12) followed by the address(es) in normal face lower case. An asterisk (\*) must be placed after the corresponding author's name as superscript whose email id, fax, telephone number can be given.

Corresponding author has the responsibility to ensure that all co-authors are aware and approve the contents of the submitted manuscript.

**Abstract:** This section should detail the problems, experimental approach, major findings and conclusion in one paragraph and should appear on the second page. Avoid abbreviating, diagram and references in the abstract. It should be double - spaced and should not exceed 150 words for full papers.

**Keywords:** Author(s) must give about 4-6 key words which can identify the most important subjects covered by the paper. They must be placed at the end of the abstract.

**Introduction:** The manuscript should include a brief introduction stating the purpose of the investigation and relating the manuscript to similar previous research. Only information essential to the arguments should be presented.

**Materials and Methods:** This section must contain specific details about the materials studied, instruments used, specialized chemical source and related experimental details which allows other research worker to reproduce the results. Obtain permission for all fully borrowed, adapted, and modified tables and provide a credit line in the footnote.

**Results and Discussions:** The results should be concisely presented. Results and discussion may be separate or combined based on the author's requirement. Tables and figures should be designed to maximize the comprehension of the experimental data. The interpreted results should be explained clearly in discussion and should relate them to the existing knowledge in the field as clearly as possible. Tables, graphs and figures (illustrations and photos) should be inserted into the main text at respective place they should appear when published and should have appropriate numbers and titles with an explanatory heading. Labels on the table, graph and figures **MUST** be in the text form and should not form part of the image. Color photographs and illustrations (line drawings, halftones, photos, photomicrographs, etc.) must be original, clean and sharp digital files.

**Conclusion:** The author should conclude his/her finding accordingly.

**Acknowledgement (if any):** This section can be kept at the end of the manuscript before the reference section. This section can be used to acknowledge the help of those who do not qualify for authorship or to acknowledge funding, donated resources or significant contribution to the research.

### **Important instructions:**

Page limit: Max 15 pages.

The date should be written as: 30 March 2012

Numbers below ten must be spelled out unless it is preceded with a unit of measure (e.g. nine mice; 10 mice; 3 cm; 6 ind.m-2);

Length of time should be written as: (7 h and 30 min or 7.5 h.);

Scientific names at first mention must be written in full including the accepted authority (e.g. *Conus magus* Linnaeus, 1758); only initial of the genus and full species name thereafter (e.g. *C. magus*). All scientific and Latin names must be italicized

**References:** References to the literature cited in the manuscript should be numbered in order of appearance in the manuscript and cited in the text with superscript numbers. The reference number should follow the following format.

**For Journals Format:** Author(s) of article (surname initials). Title of the manuscript. Journal title. Year of publication; volume number (issue number): page numbers.

**Standard journal article:** (If more than six authors, the first six shall be listed followed by *et al.*)

Panda BB, Gaur K, Kori ML, Tyagi LK, Nema RK, Sharma CS *et al.* Anti-Inflammatory and analgesic activity of *Jatropha gossypifolia* in experimental animal models. Global Journal of Pharmacology. 2009; 3(1):1-5.

**For Books and other monograph Format:** Author AB, Author BB, Author CC. Title of Book. Ed, Vol, Publisher, City, year, page numbers.

Nadkarni KM. Indian Materia Medica. Edn 3, Vol. I, Popular Prakashan, Mumbai, 2000, 242-246.

**For Patent Reference:** Aviv H, Friedman A and Vered M. Submicron emulsions as ocular drug delivery vehicles, U.S. Patent US 5496811; 1996.

**For Website Reference:** Quick dissolving tablets. <http://www.biospace.com>. 27 May, 2001.

**Ethical Matters:** Authors involving in the usage of experimental animals and human subjects in their research article should seek approval from the appropriate Ethical committee in accordance with "Principles of Laboratory Animal Care". The Method section of the manuscript should include a statement to prove that the investigation was approved and that informed consent was obtained.

**Submit Manuscript at: [info@veterinarypaper.com](mailto:info@veterinarypaper.com)**

**Welcome To****International Journal of Veterinary Sciences and Animal Husbandry**

International Journal of Veterinary Sciences and Animal Husbandry is a Peer Reviewed Open Access Quarterly Journal. Prime Focus of the Journal to publish articles related to the current trends of Veterinary Sciences and Animal Husbandry.

**Editor-in-Chief:** Dr. Islam Uddin Sheikh

**ISSN:** 2456-2912

**Impact Factor (RJIF):** 5.69

**Media:** Print and Online

**Type:** Peer Reviewed / Refereed Journal

**Publication Frequency:** Quarterly

International Journal of Veterinary Sciences and Animal Husbandry considers review and research articles related to: **Animal Anatomy, Physiology, Biochemistry, Pharmacology, Microbiology, Pathology, Parasitology, Infectious diseases, clinical sciences, Alternative veterinary medicines and biomedical fields, Livestock production and technologies, All aspects of veterinary technology, Animal Breeding and experimental animals.**

Your views and comments will be highly acclaimed. Author can send their articles to [info@veterinarypaper.com](mailto:info@veterinarypaper.com). All manuscripts are subjected to RAPID peer review process and those of high quality (which are not previously published and are not under consideration for publication by another journal) would be published without any delay in subsequent issues. Online submission of the manuscript is strongly recommended. A manuscript number will be mailed to the corresponding author within one week or earlier.

On the behalf of International Journal of Veterinary Sciences and Animal Husbandry, I would like to extend my regard to the all fellow researchers and scholars and wish prosperity in their field.

(Editor-in-Chief)

Journal will be Indexed and Abstracted in following Database(s).

## Characteristics of fatty acids, in local minahasa pigs, north Sulawesi

**Ellen Hettie Adil, Revolson Alexius Mege and Mokosuli Yermia Samuel**

### Abstract

Has conducted research that aims to get the content of proximate and fatty acid profiles of local pork Minahasa. The results showed that the carbohydrate content of local pork abdominal fat was 9.26%; protein content of 14.27% and 47.58% fat content. The highest fatty acid content is oleic fatty acid (50.12%), followed by 14.45% palmitic fatty acid, stearic 14.25% and 9.25% linoleic. Arakidat fatty acids (3.16%), Palmioleat (3.12%), myristic (2.1%) and lauric (0.75%). Based on the amount of carbon it is found one chain fatty acids are lauric, 3 medium chain fatty acid) is miritrat, palmioleat and palmitate; 4 long chain fatty acid is oleic, linoleic, stearic and arakidat. Judging from the types of saturated fatty acids and unsaturated, the local pork abdominal fat gained 4 saturated fatty acids (lauric, myristic, palmitic and stearic) and unsaturated fatty acids 4 (palmioleat, linoleic, oleic and arakidat).

**Keywords:** Local Pig, Minahasa, fatty acids

### Introduction

Indonesia has five of the eight species of wild pigs in the world (Rothschild *et al.*, 2011) [12]. Local pork in Indonesia, among others, local pork hobo, Krawang local pork, local pork Nias and local pork and pork ground Toraja local Minahasa (Devantoro *et al.*, 2015) [2]. The diversity of wild pigs in Indonesia evidenced by the discovery of four different alleles and is the highest number of alleles mitochondria have been found (Choi *et al.* 2014) [1]. Local pig Minahasa is part of the eight sub-species of Sulawesi local pig (*Sus celebensis*). Pigs are cultivated by the Minahasa community consisted of local pork and pig races, especially race "banpres" (Mege and Mokosuli, 2017) [6]. In a large-scale pig farmer community prefer the race because of large body size so as to provide meat in quantities greater than local pork Minahasa smaller size. Food or feed the pig races are generally in the form of processed pellet mill while the local pig breeding on a small scale because the feed used by farmers are tubers, corn, bran (Konga) rice etc. are generally derived from nature. In biochemistry, animal feed will affect the metabolism of proteins, carbohydrates and lipids organisms (Nelson and Cox, 2005) [10]. Thus the composition or lipid profile local pork and pork can theoretically different races so interesting study because of the case or the incidence of disease caused by hyperlipidemia in Minahasa is currently quite high (Mokosuli *et al.* 2017) [7].

The proximate analysis and analysis of the content of the fatty acid composition of local pork is very rarely done in Indonesia because the majority of people in Indonesia do not eat pork for Muslims. However some sub-ethnic in Indonesia who do not embrace Islam makes pigs as the main source of meat. Thus still very little or no research publications proximate content and fatty acid composition of local pork in Indonesia, more specifically the local pig Minahasa. This study aimed to obtain the composition of protein, carbohydrate and lipid local pigs total adipose tissue Minahasa and get the composition of fatty acids.

### Materials and methods

#### Samples

Pork samples obtained from the Village Ratahan Likupang Southeast Minahasa Regency and North Minahasa Regency. Network abdomen and thighs local pork used in the stage of proximate analysis and analysis of fat content.

#### Correspondence

**Ellen Hettie Adil**  
Department of Biology  
Biological Studies Program,  
State University of Manado,  
Indonesia

**Proximate analysis**

Local pig proximate analysis using method SNI. Content of Carbohydrates were analyzed by methods SNI 01-2891-1992 item 9, Fat method SNI 01-2891-1992 items 8.1 and carbohydrates with methods SNI 01-2891-1992 item 5.5.

**Analysis of Fatty Acid Content**

**Tools used:** GC with autosampler using the machine. Separation is done in a column DB1-MS Restech, 30m x 0.25 mm ID, 0.25 µm, with a stationary phase polymethyl xiloxan, injector temperature 230oC, column temperature of 70 ° C and raised to 300oC with 10oC rise / min flow rate of 1.15 mL / min. Helium gas mobile phase. MS detector used is Multifier Electron Detector (EMD) 70 MeV.

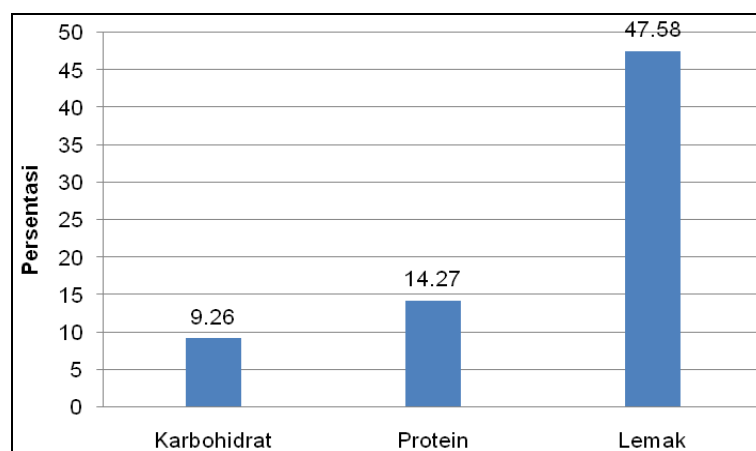

Analysis of short-chain fatty acids using gas chromatography according to the method. minahasa local pork abdominal tissue is cut into small pieces, melted at a temperature of 90 0 C to 1000C for 1-1.5 hours in an oven. Lemakyang had melted filtered with flannel, added anhydrous Na2SO4 and then centrifuged at 3000 rpm for 20 minutes. Didekanter oil

layer, filtered with Whatman paper placed anhydrous Na2SO4. The solution was stored in cupboards ice at -20 0C in a test tube rolling. The solution was used for derivatization process. Fatty acid derivatisation aims to transform fatty acids into metal form fatty acid esters (fatty acid methyl ester) using NaOCH3 0.2 N and a solution of BF3. Results derivatisation containing derivatives of fatty acid methyl esters (FAME) is taken and injected into the gas chromatograph system. A total 1µL supernatant was injected into a gas chromatograph-mass spectrometry, replication is performed 3 times (Rohman *et al*, 2012)<sup>[11]</sup>.

**Results and discussion**

**Proximate analysis**

Abdominal fat is used for the local pig proximate analysis and fatty acid content. Carbohydrate, protein and fat to do with the method of SNI. The results of the analysis of carbohydrate content of local pork abdominal fat was 9.26%; protein content of 14.27% and 47.58% fat content (Figure 1).

**Fig 1:** Percentage content of karbohidrat, Protein and Fat Pig Fat Abdomen Local

**Analysis of fatty acid content**

Analysis of fatty acid content, pork fat samples taken using an oven where the temperature and time controlled so that the fat content is maintained. Oven method can also prevent the loss of volatile komponenj contained in lard, yield earned more, simple and relatively cheap because it does not use any synthetic chemicals. Analysis standard fatty acid methyl esters are used in the form of Fatty acid methyl ester (FAME) using gas chromatography mass spectroscopy. Results of analysis of fatty acid content of local pork is shown in Figure 3. The highest fatty acid content is oleic fatty acid (50.12%), followed by 14.45% palmitic fatty acid, stearic 14.25% and

9.25% linoleic. Arakidat fatty acids (3.16%), Palmioleat (3.12%), myristic (2.1%) and lauric (0.75%) (Figure 2). When viewed from the grouping fatty acid based on the amount of carbon it is found one short chain fatty acids (short chain fatty acid: SCFA) are lauric, 3 medium chain fatty acids (medium chain fatty acid: MCFA) is miritrat, palmioleat and palmitate; 4 long chain fatty acids (long chain fatty acid; LCFA), namely oleic, linoleic, stearic and arakidat. Judging from the types of saturated fatty acids and unsaturated, the local pork abdominal fat gained 4 saturated fatty acids (lauric, myristic, palmitic and stearic) and unsaturated fatty acids 4 (palmioleat, linoleic, oleic and arakidat).

**Fig 2:** Content (Percent) fatty acids on Abdominal Fat Pig Local

The percentage of local pork fatty acid content as compared to wild boar, pig and cow hybrid are shown in Figure 3. The data referred fatty acid content of In the three types of pork highest percentage of fatty acid content is oleic acid, while the cows as a comparison the highest is stearic fatty acids. Oelat fatty acid and stearic fatty acids have the amount of carbon 18 but oleic fatty acids have one double bond so categorized unsaturated fatty acid stearic fatty acids while not having the

double bond thus categorized saturated fatty acids (Nelson and Cox, 2005) [10]. For palmitic acid content of the three types of pigs, wild boar has the highest content (19.61%), then the pig hybrids (18.55%) and 14.45% local pork; whereas palmitic acid content in the cow 27.39%. When viewed from the saturated fatty acid content of the highest are cows (66.29%), then the pig (36.92%), pig hybrids (32.66%) and the least in the local pigs (Figure 3).

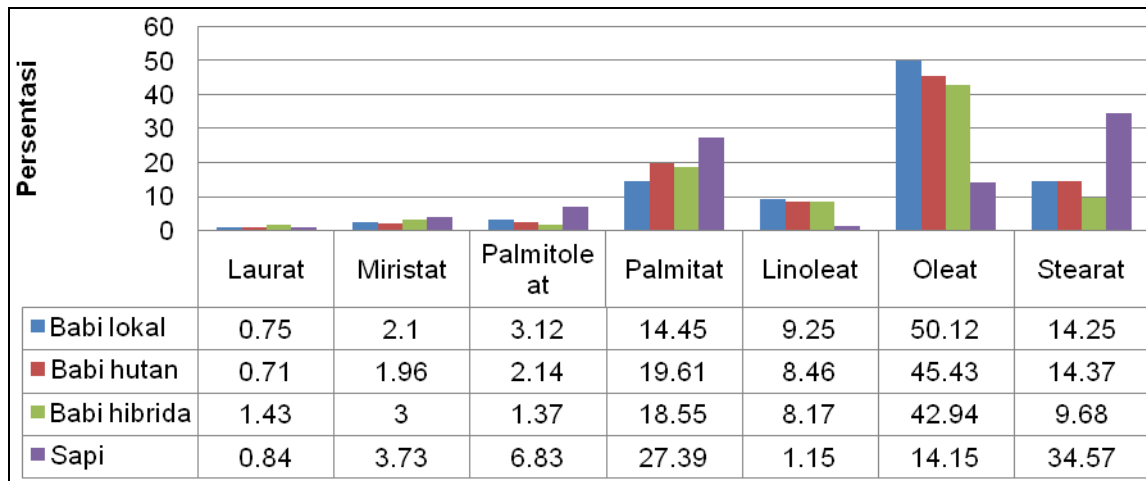

Fig 3: Comparison of Fatty Acid Content in Pigs and Cows

## Conclusion

### From these results it can be concluded

1. The carbohydrate content of local pork abdominal fat is 9.26%; protein content of 14.27% and 47.58% fat content.
2. The highest fatty acid content is oleic fatty acid (50.12%), followed by 14.45% palmitic fatty acid, stearic 14.25% and 9.25% linoleic. Arakidat fatty acids (3.16%), Palmioteat (3.12%), myristic (2.1%) and lauric (0.75%).
3. Based on the amount of carbon it is found one short chain fatty acids (short chain fatty acid: SCFA) are lauric, 3 medium chain fatty acids (medium chain fatty acid: MCFA) is miristat, palmioteat and palmitate; 4 long chain fatty acids (long chain fatty acid; LCFA), namely oleic, linoleic, stearic and arakidat. Judging from the types of saturated fatty acids and unsaturated, the local pork abdominal fat gained 4 saturated fatty acids (lauric, myristic, palmitic and stearic) and unsaturated fatty acids 4 (palmioteat, linoleic, oleic and arakidat).
